How would your practice respond to a cyber event? Dental and oral surgery practices are experiencing more cyberattacks and cases of identity theft that are resulting in lost productivity, damage to their professional reputation, and loss of credibility and patient trust.

In this live webinar, you will learn:

- How to protect your practice from ransomware attacks and identity theft.
- Technologies and solutions that can help minimize the chances of a cyberattack.
- The differences between IT companies and cybersecurity companies.
- When and how to initiate a claim with your insurance company in the event of a cyberattack.
